

## **BURBANKS NORTH YIELDS NEW SHALLOW GOLD ZONE**

Barra Resources Limited is pleased to announce preliminary results of a recent Reverse Circulation (RC) drilling program at the Company's wholly owned Burbanks Gold Project, located 8 kilometres south of Coolgardie Western Australia.

In early June 2010, the Company commenced a significant RC drilling program to test three prospects; Burbanks North, Fangjaw and Pipeline. The following RC drilling results are from the Burbanks North prospect; results from the latter two prospects are pending.

The results received to-date represents two-thirds (BBRC170-192) of the drilling undertaken at Burbanks North (33 holes, BBRC170-202 for 2,440m), which has tested an area 350 metres in length and located 1.2 kilometres along strike to the north of the Company's existing operations at the Burbanks underground gold mine (see Figure 1). Significant results from Burbanks North include:

**10.0 metres grading 3.85 grams per tonne gold**  
***(including 6.0 metres grading 5.74 grams per tonne gold)***

**10.0 metres grading 3.90 grams per tonne gold**  
***(including 6.0 metres grading 6.07 grams per tonne gold)***

***6.0 metres grading 4.18 grams per tonne gold***

**and 10.0 metres grading 3.53 grams per tonne gold**  
***(including 1.0 metres grading 20.19 grams per tonne gold)***

The results are highly encouraging and give the Company confidence that it can potentially define its second<sup>1</sup> shallow oxide gold resource for 2010 (Refer Table 1 for all significant intersections).

Mineralisation at Burbanks North is associated with sheared mafic volcanic and diorite rocks within the larger Burbanks Shear Zone which also hosts the high-grade mineralisation at the Company's Burbanks underground mine. At present, the mineralised zone is open in all directions; further drilling to test the strike extent of this discovery is anticipated once preliminary resource estimation work has been completed.

A handwritten signature in black ink, appearing to read "D Goodwin", is positioned above the name of the signatory.

**Dean Goodwin**  
Director  
Barra Resources Limited

<sup>1</sup> In addition to the recently identified high-grade Diablo Lode at the Phillips Find Project (85% Barra, 15% Cazaly Resources Ltd).

The information in this report that relates to Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Dean Goodwin who is a Member of the Australian Institute of Geoscientists. Dean Goodwin has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2005 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Dean Goodwin consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
